1. Course Contact

Dr. Shravan Narayan

Classes: 3:30pm to 5pm at GDC 5.302 on Tuesday, Thursday

Canvas: <https://utexas.instructure.com/courses/1450957>

Office Hours: At GDC 6.430, 2:30pm to 3:30pm on Wednesday, 5pm to 6pm on Thursday.

(Emailing to let me know you're coming helps. Also email me if you need alternate meeting times)

Email: shr@cs.utexas.edu (Expect a response within 48 hours)

TA: Matthew Sickler mjs7565@utexas.edu (Always cc shr@cs.utexas.edu)

TA office hours: 10:00-11:00 am on Fridays + extra office hours on Monday 12:45pm to 1:45pm on weeks that assignment are due (will be announced on Canvas), GDC room 6.416

Syllabus last updated: Aug 27th 2026, 7pm

2. Course overview, objectives, and requirements

This course focuses on computer security, covering a wide range of topics on both the defensive and offensive side of this field. Among these will be systems security and exploitation (e.g., buffer overflows and return-oriented programming), sandboxing and isolation, side channels, network security, JavaScript runtime security and more. The goal of the course is to provide an appreciation of how to think adversarially with respect to computer systems as well as an appreciation of how to reason about attacks and defenses.

The formal prerequisite for CS 361S is CS 439 (or 352 or 372) or CS 439H (or 352H or 372H).

At a minimum, students are expected to have knowledge of programming with C, compiling C applications, the memory layout of C applications including stack and heap, as well as standard terms and operations from programming and compilation such as how control flow (branches, indirect function calls) work, what a program counter does etc. Comfort with writing small Python and JavaScript programs and using Linux/UNIX tools, terminals, ssh, debugging tools is also expected. Finally, a basic understanding of computer architecture and at least one CPU ISA (x86, ARM, RISC-V) is expected.

3. Class attendance

The class will use a combination of slides, notes on whiteboard and live demonstrations. The slides will be made available, but you will have to take notes for whiteboard or live demonstrations. We may consider opening the collaborative class notes option on Canvas if there is enough interest for this.

If you are unable to attend some classes, it will be your responsibility to talk to your classmates to catch up with notes etc. You are always welcome to clarify your understanding of material you missed or haven't understood in the office hours.

If you have another class that conflicts with any part of this class, or if you think you cannot attend this class regularly, you should not take this class.

4. Lecture recordings

This class will be recorded but lecture recordings will only be selectively released – at instructor's discretion for valid UT-approved absences (medical leave etc.) and prior to midterm/final exams. At the instructor's discretion, recordings may be made available prior to the midterm or assignments, but this is not a guarantee. So, attending class regularly will be necessary to keep up with the material.

Each student may additionally request access for up to two recorded lectures to help catch up to any missed classes.

Class recordings, if provided, are reserved only for students in this class for educational purposes and are protected under FERPA. The recordings should not be shared outside the class in any form. Violation of this restriction by a student could lead to Student Misconduct proceedings.

5. Grading

The grading scheme is as follows:

- Perusall readings + online quizzes – 12%
- Assignments 7 or 8 – 35% (not equally weighted)
- Midterm: 25%
- Final: 27%

Each of these are explained in the next sections.

Grading scheme (Final scores maybe curved by the instructor)

- A : 100% to 94%
- A- : 94% to 90%
- B+ : 90% to 87%
- B : 87% to 84%
- B- : 84% to 80%
- C+ : 80% to 77%
- C : 77% to 74%
- C- : 74% to 70%
- D+ : 70% to 67%
- D : 67% to 64%
- D- : 64% to 61%
- F : 61% to 0%

6. Perusall

We will be using perusall to assign class readings. This will include a few short questions about the reading or the course contents. There will be one reading every week. The expectation is that you will be able to commit time every week to do the readings.

7. Assignments

There will be 7 or 8 assignments. The first assignment is easier and may not count as much as the other assignments towards the overall grade.

You have two late days that you may use to turn in work past the deadline over the entire semester. A late day is a contiguous 24-hour period starting at the assignment due time. Use of partial late days are always rounded up to the next full day. These late days are intended to cover your extension needs for usual circumstances: brief illness, busy with other classes, interviews, travel, extracurricular conflicts, and so on. You do not need to ask permission to use a late day

Assignments maybe assigned as individual assignments or for groups of 2. If you use late days on group assignments, both you and your partner will be charged for every late day that you use, and you both must have late days to use them.

8. Midterm and final exam

This course will have a written midterm and a written final exam to be taken in-person. During the exam, no use of electronics is permitted in the exam/hallways or anywhere else until exams are turned in. There will be no makeup exams except for UT-authorized excuses. We may solely at the discretion of instructor re-weight other components of the grade to account for missed midterms for authorized reasons. See class schedule for dates.

9. Policy on Academic Accommodations

The university is committed to creating an accessible and inclusive learning environment consistent with university policy and federal and state law. Please let me know if you experience any barriers to learning so I can work with you to ensure you have equal opportunity to participate fully in this course. If you are a student with a disability, or think you may have a disability, and need accommodation please contact Disability and Access (D&A). Please refer to D&A's website for contact and more information: <http://diversity.utexas.edu/disability/>. If you are already registered with D&A , please deliver your Accommodation Letter to me as early as possible in the semester so we can discuss your approved accommodation and needs in this course.

10. Academic Integrity

Recall the Student Honor Code: "As a student of The University of Texas at Austin, I shall abide by the core values of the University and uphold academic integrity."

Students who violate University rules on academic dishonesty are subject to disciplinary penalties, including the possibility of failure in the course and/or dismissal from the University. Since such dishonesty harms the individual, all students, and the integrity of the University, policies on academic dishonesty will be strictly enforced. For further information, please visit the [Student Conduct and Academic Integrity Website](#).

To detect instances of academic integrity violations in programming assignments we may use 3rd party software.

11. Artificial intelligence

The use of artificial intelligence tools (such as ChatGPT) as “assignments solvers” in this class is strictly prohibited. Any use of AI tools detected will always be reported as an attempt to cheat and an official violation of course policy. Use of AI tools as “search engines” is permitted.

12. Religious holy days

Religion (or lack thereof) is an important part of who we are. If a holy day observed by your religion falls during the semester and you require accommodation due to that, please let me know as soon as possible. Email is an acceptable form of communication. To guarantee accommodation around presentations or other big deadlines, I will need notice of at least two weeks. If you are unable (or forget!) to provide that notice, please contact me anyway in case I can still accommodate you.

University-required language: A student who is absent from an examination or cannot meet an assignment deadline due to the observance of a religious holy day may take the exam on an alternate day or submit the assignment up to 24 hours late without penalty, ONLY if proper notice of the planned absence has been given. Notice must be given at least 14 days prior to the classes which will be missed. For religious holy days that fall within the first two weeks of the semester, notice should be given on the first day of the semester. Notice must be personally delivered to the instructor and signed and dated by the instructor, or sent certified mail. Email notification will be accepted if received, but a student submitting email notification must receive email confirmation from the instructor.

13. Class Calendar

The course calendar is here to give you an idea. It is subject to change depending on how quickly we progress through the material. We may add, remove or replace material based on interest.

Note: Assignment start/end dates may also change. Perusall readings will be updated as we go. Pay attention to class announcements for calendar updates.

	Theme	Class Contents	Assignments/Readings
Tue, Aug 25	Origins Systems Security	Contents History of Systems Security. Extra resources Multics: B2 Security Evaluation Memory Corruption Attacks The (almost) Complete History - Haroon Meer (2010) E.H. Spafford: “The Internet Worm Program: An Analysis” (1988)	

Thu, Aug 27	Stack Buffer overflows, C, x86, and GDB.	Contents How buffer overflows work. Quick demo on GDB usage. Extra resources Smashing the Stack for Fun and Profit - Aleph One (1996) – reformatted in 2017 Section 30.1 to Section 30.2.1 of Low-Level Software Security by Example - Úlfar Erlingsson, Yves Younan, and Frank Piessens (2010) GDB documentation: Debugging with GDB	Perusall reading 1 due on Sept 2nd Smashing the Stack for Fun and Profit - Aleph One (1996) – reformatted in 2017
Tue, Sep 1	GDB cont. Shellcoding tips & tricks. Other memory safety bugs.	Contents Continued GDB usage. Shellcoding, Integer overflows, format string bugs Extra resources V. van der Veen, N. dutt-Sharma, L. Cavallaro, and H. Bos: “Memory Errors: The Past, the Present, and the Future” (2012) scut: “Exploiting Format String Vulnerabilities” (2001)	Assignment 1 available (GDB) due on Sept 8th
Thu, Sep 3	Other bugs, (Legacy) mitigations for memory safety	Contents Canaries, Data Execution Prevention, ASLR Extra resources T. de Raadt: “Exploit Mitigation Techniques: An Update after 10 Years” (2013)	Perusall reading 2 due on Sept 8th V. van der Veen, N. dutt-Sharma, L. Cavallaro, and H. Bos: “Memory Errors: The Past, the Present, and the Future” (2012)
Tue, Sep 8	Code reuse I	Contents Return-to-Libc, ROP Extra resources Nergal, “The advanced return-into-lib(c) exploits: PaX case study” (2001)	Assignment 2 available (Buffer overflow) due Sept 24th

		R. Roemer, E. Buchanan, H. Shacham and S. Savage: “ Return-Oriented Programming: Systems, Languages, and Applications ” (2012)	
Thu, Sep 10	Code Reuse 2 (ROP), Control-flow integrity	Contents ROP, Control-flow graphs, control-flow integrity Extra resources M. Abadi, M. Budiu, Úlfar Erlingsson, and J. Ligatti: “Control-Flow Integrity: Principles, Implementations, and Applications” (2009) Nathan Burow, Scott A. Carr, Joseph Nash, Per Larsen, Michael Franz, Stefan Brunthaler, Mathias Payer: “Control-flow integrity: Precision, security, and performance” (2017)	Perusall reading 3 due Sept 15th R. Roemer, E. Buchanan, H. Shacham and S. Savage: “Return-Oriented Programming: Systems, Languages, and Applications” (2012)
Tue, Sep 15		Contents Control-flow integrity continued. Control-flow bending. Extra resources N. Carlini et al.: “Control-Flow Bending: On the Effectiveness of Control-Flow Integrity” (2015)	
Thu, Sep 17	Other memory safety attacks. Isolation and secure design.	Contents Temporal safety and use after free. Secure application design using processes Extra resources Low-Level Software Security by Example - Úlfar Erlingsson, Yves Younan, and Frank Piessens (2010) A. Barth et al.: “The Security Architecture of the Chromium Browser” (2008) N. Provos, M. Friedl, P. Honeyman Preventing privilege escalation (2003)	Perusall reading 4 due Sept 22nd TBD
Tue, Sep 22	Isolation in browsers	Assignment 2 due. Contents System calls subsets Extra resources
